

KARTIKEY GUPTA

FULL-STACK DEVELOPER · BACKEND · AI INTEGRATION · GENAI ENGINEER

PROFESSIONAL SUMMARY

Full-Stack Developer with 6+ years of experience building scalable web, mobile, and AI-first applications. Shipped an AI support system that auto-resolves **78% of tier-1 tickets** at 4,800 concurrent users and 99.7% uptime — without proportional headcount growth. Designed MCP-based agent workflows that execute internal operations autonomously, eliminating **6h+/week** of manual ops with a full audit trail. Track record across Fortune-500 fintech (FIS Global/Worldpay), product startups, and SaaS — I own the full stack from database to UI and integrate AI where it genuinely moves business outcomes.

TECHNICAL SKILLS

AI & GenAI	Claude API, OpenAI API, Ollama, MCP Protocol, LangChain, RAG Pipelines, AI Agents, Function Calling, Prompt Engineering
Backend	Node.js, Python, Express.js, REST APIs, GraphQL, Microservices, JWT Auth, WebSockets
Frontend	React.js, Next.js, TypeScript, React Native, Redux, Context API, Tailwind CSS, Framer Motion
Data	PostgreSQL, MySQL, MongoDB, Redis, ETL Pipelines, SQL Optimization, Salesforce API, Pandas
DevOps	AWS (EC2, S3, Lambda), Docker, CI/CD, Git, Nginx

WORK EXPERIENCE

Full-Stack Developer | Jan 2023 – Present

- Evren
- 78% of tier-1 support tickets resolved without a human — built the LLM classification pipeline (Claude API, OpenAI, Ollama) behind a unified gateway handling **4,800 peak concurrent sessions at 99.7% uptime**, scaling the platform without proportional support headcount growth
 - 6h+/week of manual internal ops eliminated — designed MCP server-based AI agents that autonomously execute workflows (DB queries, Slack notifications, report generation) on trigger, with a full audit trail on every action
 - Led **Node.js backend architecture**, RBAC security redesign, and React UI overhaul — delivered **–30% API latency**, **+40% portal adoption**, and cut debugging time by 50% through structured Python log-analysis tooling

Full-Stack Developer & Team Lead | Jul 2021 – Dec 2022

- Bestpeers Infosystem
- Led a **3-engineer team** shipping one product across web (React.js), iOS (React Native), and a custom smartwatch — single Node.js + MySQL backend, shared JWT auth — delivered with **+25% performance** over the previous system
 - Enforced structured code review gates and architecture standards driving a **35% drop in post-ship bug reports** — quality built in during development, not patched after launch
 - Eliminated memory leaks, N+1 queries, and security vulnerabilities at development time; applied Redux, Context API, and memoization for a performant, maintainable frontend

Software Developer | Aug 2019 – Jun 2021

- FIS Global (Worldpay)
- Built the REST API test automation framework that let FIS’s payment platform deploy continuously — **90%+ test coverage**, **80% of manual QA eliminated**, zero-regression CI/CD pipeline integrated from day one
 - Engineered a fault-tolerant **ETL pipeline** syncing SQL transaction databases with Salesforce CRM — **95% data accuracy at financial scale**, zero manual reconciliation, retry logic with dead-letter queuing and full audit trail

ACADEMIC HISTORY

RGPV University, LNCT College | 2015–2019

Bachelor of Engineering (Computer Science)

CERTIFICATION

Machine Learning with R — Level 1 IBM, 2018	MongoDB Developer Certification MongoDB, Inc., 2021
Big Data Foundations — Level 2 IBM, 2018	Spark — Level 1 IBM, 2018
Hadoop Foundations — Level 1 IBM, 2018	Build Your Own Chatbot — Level 1 IBM, 2018
